Building Web Applications in PHP

ПРОЕКТЫ

Project 1: Portfolio Website
- Designed and developed a personal portfolio website showcasing projects and skills
- Implemented responsive layout using HTML, CSS, and media queries
- Incorporated JavaScript for interactivity and smooth scrolling
- Deployed the website using hosting services like Netlify

Project 2: Weather App
- Built a weather application using React and a weather API
- Fetched weather data based on user input
- Displayed weather information with dynamic backgrounds
- Implemented responsive design for optimal user experience on different devices
